

AGRICULTURE AND FOOD

In the agriculture and food segment, we have chosen to place great emphasis on hygiene and shelf-life, two important cornerstones when working with materials meant for farming and food contact.

Sealing polymers in the agricultural and food industries to be developed for two main purposes:

- ✓ To achieve the right traits for the item externally in terms of function and protection
- ✓ To achieve the right environment internally for the contents of the package

The food's freshness, aroma and flavor is preserved much longer with the right protection while the shelf life is extended significantly.

In this segment we work with the following products, among other:

Agriculture:

- Geo-textiles
- Ground cover
- Flower wrapping
- Plant protection sheet
- Cultivation cover
- Reflective ground cover
- Absorbing ground cover

Food:

- Packaging for food stuff, fast food and baking products
- Salmon trays
- Plates
- Mugs
- Wrap paper

We work with the following materials, among other:

- Plastics
- Non-woven
- Paper
- Cardboard
- Aluminium

The customer would like to raise the market value of the products, and in doing so, become more competitive, we have an in-line printing system.

Of course, we take into account the environment throughout the entire process and if the customer would prefer we can offer coating with so called green barriers. Read more about them in our white paper "Color me green".

In this segment we work with three types of plastic materials; renewable, bio-degradable and renewable bio-degradable.
